

Moss Briefs:

ProMoss™ and Water Savings

The cooling tower at a chicken processing facility in Missouri, known for hot summers and hard water, used ProMoss™ on a cooling tower for 13 weeks during the summer of 2015. 1,563,500 gallons of water were saved during the test period and facility engineers estimate **annual water savings of over 6,000,000 gallons** would be realized for this one condenser alone.

“...the experience has been great and the quality of the water has been outstanding... we are seeing a dramatic water savings using the moss and it will only get better as the moss continues to clean up the condensers.”

-- Refrigeration Superintendent

Use ProMoss™ in your cooling tower and:

- Decrease organic contamination and scale
- Decrease corrosion
- Increase cycles of concentration
- Save water
- Reduce maintenance
- Reduce costs

KEY RESULTS

- Improved Water Quality
- Improved Air Quality
- Stabilized pH and Alkalinity
- Reduced Scale and Staining
- Reduced Corrosion

KEY BENEFITS

- Reduced Chemical Usage
- Reduced Water Usage
- Reduced Energy Usage
- Reduced Maintenance
